METERS & CONTROLS LTD.

SVN2000 Flow Meters

Compact Insertion Meter

DESCRIPTION

The SVN2000 Compact Insertion Vortex Flow Meter measures the volumetric or mass flow rate or BTU/energy of steam, gas or liquids over a large flow range. The meter includes a mounting assembly alignment pin to simplify the installation. The meter is designed for specific pipe sizes and includes parts for installation.

The vortex sensing element is CNC machined out of one piece of solid stainless steel and engineered to stand up to abusive environments inside and outside the pipe. The dual ceramic piezoelectric sensors are bonded inside the vortex element, which is press-fit to the stainless steel insertion bar and completely welded together. There are no internal o-rings or seals of any kind and absolutely no leak paths into the sensors or electronics. Our sensors do not touch the process fluid, which gives them an almost unlimited life span.

BENEFITS

- Measure volumetric, mass flow rate or BTU/energy of steam, gas or liquids
- Lower profile insertion meter for pipes 2...24 in.
- Simplify installation with an insertion meter and pipe mounting assembly designed for the specific pipe size
- Reduced noise interference with dual piezoelectric sensors and filtering
- Standard model handles process temperatures up to 400° F (204° C)
- Reduced maintenance due to:
 - ◊ Heavy duty welded stainless steel construction
 - ◊ O-ring-free element
 - ◊ No moving parts
 - ◊ Piezoelectric and temperature sensors never touch process fluid

OPERATION

An everyday example of a vortex shedding phenomenon is a flag waving in the breeze: the flag waves due to the vortices shed by air moving across the flagpole. Within the flow meter, as flowing fluid moves across the tiny strut or "shedder bar", vortices are shed on a smaller scale. The frequency of the vortices shedding is proportional to the fluid velocity.

Through the use of an internal RTD, the flow meter software compensates for changes in temperature to achieve an accurate mass flow measurement.

With the addition of a second external RTD, the meter can measure the energy transfer across a heat exchanger.

APPLICATIONS

The unique design of the SVN2000 meter can be used in steam, gas or liquid lines. The same design can measure water as low as 1.32 feet per second and saturated steam in excess of 250 feet per second.

INSTALLATION

The SVN2000 Compact meter includes a mounting assembly with alignment pin and an arrow machined into the mounting assembly that shows the direction of flow.

After depressurizing the pipe and welding the mounting assembly onto a welded outlet, insert the SVN2000 Compact meter into the mounting assembly and align the meter so the pin can be inserted into the mounting assembly. When the pin is inserted, you are ensured that the meter is inserted to the proper depth and is aligned with the flow. The pin also acts as a secondary method to prevent the meter from coming out of the pipe once the pipe is pressurized.

SIZING SOFTWARE

The Vortex Sizing Application software determines the precise scaling factor for your application based on:

- Fluid type
- Min. and max. operating flow rate
- Operating temperature
- Operating pressure

SPECIFICATIONS

	Uncertainty	
	Volumetric Flow	Repeatability
Liquids	±1.0% of reading	±0.25% of reading
Steam	±1.0% of reading	±0.25% of reading
Gas	±1.0% of reading	±0.25% of reading
	Mass or Heat Flow	
	Repeatability	
Liquids	±1.0% of reading	
Steam	±1.0% of reading	
Gas	±1.0% of reading	
Velocity – Liquid	1.32...32 ft/s (0.402...9 m/s)	
Velocity – Gas	cube root (140/p) ft/s... 300 ft/sec (91 m/sec)	
Reynolds Range	10,000...7,000,000 depending on fluid density	
Straight Run Pipe	Upstream 10 diameters; downstream 5 diameters with one 90° elbow before the meter	
Pipe sizes	2...24 in. (50...1200 mm)	
Fluid temperature	-250...400° F (-120...204°C)	
Maximum Pressure	1000 psi (68.9 bar)	
Wetted Materials	Stainless steel 304L	
Connections	1-1/2 in. carbon steel mounting assembly Sealing assembly: Two ethylene propylene O-rings	

Measurement Options	Sensors				
Volumetric flow rate	Dual piezo vortex sensors				
Mass flow rate based on velocity and temperature	Dual piezo vortex sensors RTD embedded in sensor: 100 Ohm, 3 wire				
BTU/Energy	Dual piezo vortex sensors RTD embedded in sensor: 100 Ohm, 3 wire External 100 Ohm RTD input				
Units of measure	Steam	Gases	Liquids	Energy (Any Fluid)	
	Pounds	Pounds	Pounds	BTU	
	Kilograms	Kilograms	Kilograms		
	Tons	Tons	Tons		
	Metric Tons	Metric Tons	Metric Tons

	Cubic Meters	Actual Cubic Feet	Cubic Meters		
	Gallons	Natural Cubic Meters	Gallons		
	Liters	Actual Cubic Meters	Liters		
		U.S. Gallons			
	Natural Liters				
	Actual Liters				
	Units of measure are used for flow rate, mass flow rate, heat/energy flow rate; volume total, mass total, heat/energy total				
Measurement interval	Second, minute, hour, day				

Transmitter

Display	2x16 characters reflective display Rotatable display Flow rate: 6 digits with decimal Totalizer
Keypad	4 membrane buttons
Power	14...36 V DC; loop powered with 4...20 mA option
Operating Temperature	32...140° F (0... 60° C) 5...95% relative humidity non-condensing
Output	One 4...20 mA, 10...36V max load, 24-bit resolution Adjust the 4 mA and 20 mA signal from the keypad and zero out any anomalies found between the meter and the monitoring device
Digital Output	One min. input resistance 1000 Ohm Max output frequency = 12.5 Hz Opto isolator 5...24V DC
Communication	EIA-485 with Modbus RTU (9600, 14400, 19200 baud) or BACnet MS/TP (9600, 19200, 38400, 76800 baud)
Enclosure	General purpose
Mounting	Integral meter or remote mount; Up to 30 ft (10 m) from pipe
Cable	Cable jacket material: polyurethane (gray) Operating temperature -13...185° F (-25...85° C)

Power Plug

The multi-pole connector virtually eliminates wiring errors in the field. Simply plug the connector into the top of the enclosure and screw it down. This design saves time and money because the electronics package never comes out of the enclosure. No internal wiring is required and no connecting of hard-to-reach terminal blocks. This design also allows for a conduit connection to be attached over the power plug.

Simply plug and play!

Optional External RTD for BTU/Energy Measurement

An insertion RTD (part number SVNA-RTD) is used in conjunction with an RTD internal to the probe to measure the temperature difference across a heat exchanger. The energy transfer can be calculated by multiplying the temperature difference with the mass flow rate.
